Comfort Throughout The Home, In Every Season

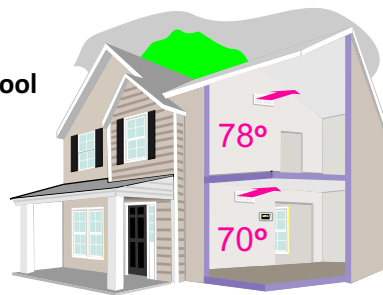

Programmable thermostat with airflow control directs airflow to where it's needed, when it's needed for a uniformly comfortable home.

The Comfort Problem

A common problem found in two-story homes is the uneven heating and cooling of the upstairs and downstairs. During the summer, the upstairs is too warm. During the winter, the downstairs is too cool.

Upstairs is too warm during the summer.

Downstairs is too cool during the winter.

The Comfort365 Solution

The Comfort365 works with your existing or new equipment to solve the problem. The Comfort365 thermostat monitors the upstairs and downstairs temperatures and automatically adjusts the airflow so that more airflow is directed to the area that needs it for a uniformly comfortable home.

The Comfort365 installation is simple. Your contractor will install a Comfort365 thermostat where your existing thermostat is located. A temperature sensor is installed in the upstairs space. Dampers that control the airflow to the upstairs and downstairs space will be installed in your ductwork.

Energy Savings

The Comfort365 saves energy by directing more airflow to where and when it is needed eliminating overheating and overcooling areas to make other areas comfortable. The Comfort365 comes with a preset schedule for additional energy savings.

Homeowner Features

Nighttime Airflow Option

The Nighttime Airflow Option uses the upstairs sensor to control heating and cooling calls and directs more airflow upstairs while sleeping. To optimize your comfort, you can set the desired airflow level in heating and cooling.

Airflow Override Option

The Airflow Override Option enables you to direct more airflow to an area that needs it. For example, during a party, you may want more airflow to the downstairs area. You can easily set the desired airflow, making that area more comfortable and enjoyable.

Easily Upgrade To WiFi

Upgrading to WiFi couldn't be easier. When you're ready to upgrade to WiFi, simply plug the WiFi version into the same subbase on the wall. No need to call out a contractor.

Touch Screen Thermostat

The Comfort365 features a touch screen with a high definition LCD display in an attractive case.
